DP-600 : Implement analytics solutions using Microsoft Fabric

► Analyze the slow DAX query

Common inefficient patterns like this include:

Repeated subexpressions: The same CALCULATE evaluated multiple times without storing it in a VAR.

FILTER on a full table: FILTER(Sales, ...) iterating every row instead of using a column predicate in CALCULATE.

COUNTROWS(FILTER(...)): Counting rows by iterating a filtered table instead of using CALCULATE(COUNTROWS(...), ...).

DP-600 : Implement analytics solutions using Microsoft Fabric

➤ Optimize the DAX measure

▶ Run

↑ Update model with changes (0)

```
1  EVALUATE
2  SUMMARIZECOLUMNS(
3      'Date'[Year],
4      "YoY Growth", [Sales YoY Growth]
5  ) |
```

Results

Result 1 of 1 ▼

 Copy ▼

	Date[Year]	[YoY Growth]
1	FY2019	0.7
2	FY2020	0.18
3	FY2021	-1
